

Rheine, March 2018

## Press release

### **OPENweb building management software from DEOS AG is B-AWS certified**

**(Rheine) OPENweb is the building management software (BACnet BMS or MCU) from DEOS AG for large and small building automation projects. The latest version OPENweb 9 has now been B-AWS certified and BTL listed and is available immediately for new installations.**

Following successful testing of the software in an accredited BTL test laboratory, DEOS AG received the certificate on February 12, 2018. OPENweb 9 is certified as a BACnet Advanced Operator Workstation (B-AWS) in accordance with the current highest conformity standard 14.0. It offers the operator maximum functionality, optimum security and interoperability with BACnet automation systems.

Using a certified Building Automation System as OPENweb, complex system landscapes can be easily combined. Many TBE planners have realised this and put these certified building management systems out to tender.

#### **Marketing has begun**

With immediate effect, DEOS system partners can now include the certified BACnet BMS OPENweb 9 in their calculations and planning for new BMS installations.

#### **Documentation**

BACnet and BTL certificates can be downloaded from the DEOS AG website (Download area). They can also be found on the BACnet international website under Listings > BTL Listing. DEOS partners can find revised tender documentation in the partner area of our website as a DATANORM file and Excel spreadsheet.

#### **BMS upgrade option available later this year**

OPENweb 9 is now available for new installations. The upgrade option, for example from an existing OPENweb 8 installation to the new OPENweb 9 BMS, is scheduled for the second half of 2018. Further information is available from the sales department of DEOS AG.

#### **Advantages for DEOS system partners**

This new OPENweb version will also save DEOS system partners valuable project planning time and facilitate improved planning when performing calculations involving both hardware and services. The bottom line is that DEOS products allow you to offer lower prices.

**More than 50 years of experience in the industry - DEOS AG**

DEOS AG has supported its partners in all areas relating to integral building automation, single room solutions and energy management for more than 50 years. DEOS AG

(Digital Energy Optimisation Systems) develops, produces and distributes intelligent solutions, products and services for building automation.

The DEOS headquarters in Rheine contains one of the most modern production lines of its kind in Europe. The patented efficiency solutions of DEOS AG ensure maximum energy savings and climate comfort in the building.

State-of-the-art IoT and Cloud products deliver considerable synergy effects through new networked DEOS solutions. In this way, DEOS building automation is driving digital services and the emergence of new business and operator models.

Here, DEOS AG partners can find all the necessary components for the management, controller and field level, to offer even greater comfort to building users. The main users of the DEOS range are the operators of hotels, office buildings, swimming facilities/thermal springs, hospitals, airports, schools/universities, museums, etc.

DEOS® is a registered trademark of DEOS AG.

In 2017, DEOS AG celebrated its company anniversary:  
50 years of innovation and technology for intelligent buildings.

DEOS AG is one of the winners of the cci Customer Confidence Prize:
