

Bundoora Homestead Art Centre, Australia

The modernization of the HVAC-system of the art gallery was an interesting challenge for DEOS Australia: the system was 50% undersized, there was limited space for ductwork and no sensor should be visible on the walls.

In 2009 DEOS Australia installed the COBAOPT system (today: OPENdynamics) in the five gallery zones which are open to the common atrium. Hence the whole building has indirectly become a COBAOPT zone with excellent temperature and humidity conditions.
