

Hells Holiday Resort, Austria

The foundation stone of Hells Holiday Resort in the mountains of Tyrol was laid almost 60 years ago. Since then the camp in Fugen in Zillertal has been grown up into an extensive holiday paradise with comfortable apartments and chalets as well as a large camp ground with about 200 sites.

The holiday resort was modernized in 2014 and equipped with a new modern heating system. The DEOS building management system regulates OPENweb and controls this new power plant, which supplies the whole camp. By means of the new system and the energy-efficient control through the DEOS building automation, Hells Holiday Resort can save 373,000 kWh a year of energy as well as the associated costs and the environment at the same time.
