

## Hotel Victory, Therme Erding, Germany

The Erding thermal springs, with its adjacent open air pool, sets itself apart from average recreation activities with its spectacular hotel complex. The Victory hotel boasts a meticulously-maintained nautical decor and together with the Venetian palazzo, offers a total of 128 guest rooms. This makes each guest in the noble cabins feel like he is on a luxury yacht or a windjammer.

DEOS AG enhanced these luxuriously furnished hotel rooms with a comprehensive single room solution featuring a FCU, central ventilation and OPENweb. Each hotel room is equipped with a FCU unit that together with the central supply air and extract air installation ensures a pleasant stay. A particularly special highlight here is the interaction between the DEOS products and the “Sihot” hotel management software. It allows the implementation of a wide range of scenarios, such as fresh air circulation. In addition, every guest can operate a user tablet

### Project details at a glance

on the room wall to control the lighting and shading as well as the temperature and ventilation. A special app was developed to operate this tablet. It communicates with the controller over a special security concept. It also provides technicians with remote access to the control units and single room solutions.

All these comprehensive and state-of-the-art room functions ensure that every hotel guest can enjoy maximum comfort at all times. They of course also provide the operator with energy-optimized, straightforward options for handling the complex technical building systems.
