

# Up to 40% time saving with DEOS onSite

## The mobile solution for efficient commissioning

In practice, the commissioning phase causes high and often non-transparent costs. In addition to delays in preliminary trades or deviations between the plan and the construction site, which cost you valuable time, commissioning also harbours other hurdles: Missing or incomplete documentation, inadequate synchronisation among colleagues or a lack of transparency of additional expenses caused by third parties. All of this leads to increased costs due to additional expenses for testing, documentation and rework, poor planning and delays in the project.

### The efficient solution: DEOS onSite

With DEOS onSite, you can commission all data points directly on the field devices in the building. In addition, the test results are automatically documented in the app with comments, photos and additional work. All settings such as offset, scaling, sensor type and operating mode can be parameterised and documented for calibrating the inputs and outputs. The stationary version in our OPEN FXL engineering tool can be used in parallel with the DEOS onSite app.

DEOS onSite makes the commissioning of your building automation more efficient, transparent and precise than ever before.

DEOS onSite

### Plug & Play connection with the onSite box

Seamless communication between the onSite app and the automation stations takes place flexibly with the onSite box via WLAN or the Internet, which enables almost seamless coverage of all areas of the building. The preconfigured box is ready to plug in and can be used across projects and is characterised by its compact, robust design and easy handling.

## Up to 40% time saving per data point for commissioning

Keep your personnel costs low with DEOS onSite: as commissioning is carried out directly on the field device, you save travelling long distances or needing the help of a second person. Even a small project with 200 data points can save a working day!

### Sample calculation

Project size:	200 data points
Commissioning effort per data point:	6 minutes
Total expense without onSite:	1,200 minutes
Time saving with onSite:	40%

**Total time savings with onSite: 8 hrs (480 mins)**
