

engelbert strauss GmbH & Co. KG, Germany

Modern architecture and creative design encounter advanced technology: the new company campus of the workwear manufacturer engelbert strauss was equipped with intelligent and energy-efficient building management systems of the DEOS building automation.

The whole energy management at the headquarters in Biebergemünd is regulated by DEOS building automation systems. The OPEN 4100 EMS as a redundant controller prevents the failure of the entire system, because in the event of a technical interruption a second controller will help out automatically. The easy to use touch user panels at all six information points offer the possibility to observe the system data and to adjust them to individual requirements of the visitors and employees.

Project details at a glance
